This was exciting from start to finish. The neurobiology of feeding in leeches.

Individuals reared in isolation for months failed to reproduce, but soon became fertile.

Also as expected, the overall productivity of the simulated cohort of 48 animals was higher than was observed for the actual cohort of 48 animals. Kobo will follow soon.

Acknowledgments We thank members of the Weisblat lab for helpful conversations about the Leech. The simulations also allowed us to match the size of the simulated cohorts to those of experimental cohorts.
