Virtual Reality in der Medizin (German Edition) VR Awards in London. Matthias Grimm. VR may be exploited to provide the CNS with artificially generated information about the arm movement and the context, particularly showing: the patient's motor performance in the VE in real time in the same frame of reference ; the representation of the whole arm; the correct movement to the patients; a real-time feedback of the mismatch between desired and actual movement; the result of patient's performance, supplied via a reward based method with a numeric score; trace of the patient trajectory and repeated animation of trajectory after the task. Youneedtobelieveinyourproduct. The workflow for one run was as follows: Step 1: Define two target C-arm poses, save X-ray images, point cloud using HMD, and C-arm position using the external tracker. The motor task is automatically adapted to the patient's anthropomorphic characteristics. Fallavollita0.

GregOsgood.Presence-TeleoperatorsandVirtualEnvironments.In addition to shortcomings regarding perception, the performance of our prototype system is further compromised by the SLAM-tracking performance of purchasable hardware.
